Office Action Summary	Application No. 10/776,742	Applicant(s) COK, RONALD S.	
	Examiner Dalei Dong	Art Unit 2879	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 19 May 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. The Amendment filed on May 23, 2006, has been entered and acknowledged by the Examiner.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
3. Claims 1-5, 7-16, 26-30 and 32-34 rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,652,930 to Teremy in view of U.S. Patent No. 4,834,495 to Whitehead.

Regarding to claim 1, Teremy discloses in Figures 10 and 11, a method for providing a replaceable area illumination light source comprising the steps of: manufacturing an area illumination (the Examiner interprets that the EL element may be used for information display and control is capable of illuminate an area, although the area may be a very small area) light source (EL element of 202, 204 and 206) on a flexible substrate (200) in a substantially two-dimensional configuration; (c) flexing and removably placing the light source in a curved three-dimensional configuration within a light fixture (see column 7, lines 1-30).

However, Teremy does not specifically disclose shipping the light source in the two-dimensional configuration.

It is old and well known in the art to ship the product in a planar configuration for as taught by the Whitehead reference in Figures 1-4, where the light source is collapsible to a flat structure for shipping (see column 2, lines 41-57) the purpose of saving space and cost during the transfer of the product.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have ship the light source of Teremy in a two-dimensional configuration as taught by Whitehead in order to save space and cost during the transfer of the light source.

Regarding to claim 2, it is old and well known in the art to packing the light source in a flat package in order to save space and cost while provide protection for the light source.

Regarding to claim 3, it is old and well known in the art to pack a plurality of light sources in a package.

Regarding to claim 4, it is old and well known in the art to remove a single light source from the package.

Regarding to claim 5, it is old and well know to handle the light source in a delicate manner where the light source may be removed from the package and mounted in a light fixture by holding and manipulating the light source by the edges of the light source in order to prevent damages to the light source during the installation process.

Regarding to claim 7, vending a product through the mail is an old and well known method of selling the product. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have vending the light source in a flat package through the mail.

Regarding to claim 8, it is old and well known in the art to vend the light source in a flat package with the light fixture.

Regarding to claim 9, it is old and well known in the art to store plurality of light sources in a flat configuration within a dispenser adapted to dispense one light source at a time.

Regarding to claim 10, it is old and well known in the art to place advertising on a non-emissive portion of the light source.

Regarding to claim 11, it is old and well known in the art to induce the sale of a lighting fixture by providing a light source at no cost to a customer.

Regarding to claim 12, it is old and well known in the art to duce the sales of a light sources by providing a lighting fixture at no cost to a customer.

Regarding to claim 13, it is old and well known in the art to test the light source in a package.

Regarding to claim 14, it is old and well know in the art to receive a deposit from a customer for a light source and returning the deposit to the customer upon a return of the light source.

Regarding to claim 15, it is old and well know in the art to receive a deposit from a customer for a light source and returning the deposit to the customer upon the purchase of a second light source.

Regarding to claim 16, it is old and well known in the art to vend a plurality of light source each in a flat package depending from a common support.

Regarding to claim 26, Teremy discloses in Figures 10 and 11, a method for providing a replaceable light source comprising the steps of: manufacturing a plurality of light source (EL element of 202, 204 and 206) on one or more flexible substrate (200) in a substantially two-dimensional configuration; (e) flexing and removably placing the

Art Unit: 2879

light source in a curved three-dimensional configuration within a light fixture (see column 7, lines 1-30).

However, Teremy does not specifically disclose forming a sequentially attach plurality of the light sources into a accordion-folded stack; shipping the light sources in the stack; detaching one or more of the light sources from the stack.

It is old and well known in the art to ship the plurality of product sequentially attached in a different configuration and detach one or more of the product after shipping. Whitehead teaches in Figures 1-4, the light source are in the form of a accordion-folded stack wherein the light source is collapsible into flat and oval configuration (see column 2, lines 41-57) for the purpose of saving space and cost during the transfer of the product.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have ship the light source of Teremy sequentially attached in a accordion configuration of Whitehead in order to save space and cost during the transfer of the light source.

Regarding to claim 27, it is old and well known in the art to provide a plurality of light sources packaged in a roll and electrically connected in parallel and means to detach and provide power to groups of individual light sources electrically connected in parallel.

Regarding to claim 28, it is old and well known in the art to provide a plurality of light sources packaged in a roll and electrically connected in series and means to detach and provide power to groups of individual light sources electrically connected in series.

Furthermore, in regarding to claims 27 and 28, the Applicant claims the light source may be connected in parallel and series, thus the light source may be connected in any manner and the manner in which the light source is connected is not patentably important.

Regarding to claim 29, it is old and well known in the art to provide the sequential attachment by a common flexible substrate.

Regarding to claim 30, it is old and well known in the art to provide the sequential attachment is provided by a common backing layer to which the light sources are attached.

Regarding to claim 32, it is old and well known in the art to vend the light sources through the mail.

Regarding to claim 33, it is old and well known in the art to vend the light sources with the lighting fixture.

Regarding to claim 34, it is old and well known in the art to vend a plurality of light sources from a dispenser adapted to dispense one light source at a time.

4. Claim 6 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,652,930 to Teremy in view of U.S. Patent No. 4,834,495 to Whitehead and in further view of U.S. Patent No. 4,672,554 to Ogaki.

Regarding to claim 1, Teremy in view of Whitehead discloses in Figures 10 and 11, a method for providing a replaceable area illumination light source comprising the steps of: manufacturing an area illumination (the Examiner interprets that the EL element may be used for information display and control is capable of illuminate an area, although the area may be a very small area) light source (EL element of 202, 204 and 206) on a flexible substrate (200) in a substantially two-dimensional configuration; (c) flexing and removably placing the light source in a curved three-dimensional configuration within a light fixture (see column 7, lines 1-30); and shipping the light source in the two-dimensional configuration.

Teremy and Whitehead does not specifically teaches the use of vending machine to vend the light source.

The Examiner asserts that vending a product from a machine is an old and well know method of selling the product. Ogaki teaches in Figures 1-4, a vending machine to vending various software programs for the convenience of customer and easy maintenance.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have vending the light source of Teremy in flat package of Whitehead from an old and well known vending machine of Ogaki in order to provide convenience for the customer and easy maintenance for the vendor.

Regarding to claim 31, it is old and well known in the art as taught by the Ogaki reference to vend the light sources from a vending machine.

5. Claims 17-21 and 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,652,930 to Teremy in view of U.S. Patent No. 6,295,818 to Ansley.

Regarding to claim 17, Teremy discloses in Figures 10 and 11, a method for providing a replaceable light source comprising the steps of: manufacturing a light source (EL element of 202, 204 and 206) on a flexible substrate (200) in a substantially two-dimensional configuration; (e) flexing and removably placing the light source in a curved three-dimensional configuration within a light fixture (see column 7, lines 1-30).

However, Teremy does not specifically disclose forming a sequentially attach plurality of the light sources into a cylindrical roll; shipping the roll of light sources; detaching one or more of the light sources from the roll.

It is old and well known in the art to ship the plurality of product sequentially attached in a different configuration and detach one or more of the product after shipping. Ansley teaches in Figures 1-3, attaching plurality of solar thermal collator in a roll to be transported to a use site and unrolled and attached to a support at the site (see column 1, lines 25-32) for the purpose of saving space and cost during the transfer of the product.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have ship the light source of Teremy sequentially attached in a cylindrical configuration of Ansley in order to save space and cost during the transfer of the light source.

Regarding to claim 18, it is old and well known in the art to provide a plurality of light sources packaged in a roll and electrically connected in parallel and means to detach and provide power to groups of individual light sources electrically connected in parallel.

Regarding to claim 19, it is old and well known in the art to provide a plurality of light sources packaged in a roll and electrically connected in series and means to detach and provide power to groups of individual light sources electrically connected in series.

Furthermore, in regarding to claims 18 and 19, the Applicant claims the light source may be connected in parallel and series, thus the light source may be connected in any manner and the manner in which the light source is connected is not patentably important.

Regarding to claim 20, it is old and well known in the art to provide the sequential attachment by a common flexible substrate.

Regarding to claim 21, it is old and well known in the art to provide the sequential attachment is provided by a common backing layer to which the light sources are attached.

Regarding to claim 23, it is old and well known in the art to vend the light sources through the mail.

Regarding to claim 24, it is old and well known in the art to vend the light sources with the lighting fixture.

Regarding to claim 25, it is old and well known in the art to vend a plurality of light sources from a dispenser adapted to dispense one light source at a time.

6. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,652,930 to Teremy in view of U.S. Patent No. 6,295,818 to Ansley and in further view of U.S. Patent No. 4,672,554 to Ogaki.

Regarding to claim 22, Teremy discloses in Figures 10 and 11, a method for providing a replaceable light source comprising the steps of: manufacturing a light source (EL element of 202, 204 and 206) on a flexible substrate (200) in a substantially two-dimensional configuration; (e) flexing and removably placing the light source in a curved three-dimensional configuration within a light fixture (see column 7, lines 1-30); and forming a sequentially attach plurality of the light sources into a cylindrical roll; shipping the roll of light sources; detaching one or more of the light sources from the roll.

However, Teremy and Ansley does not specifically disclose vending the light source through a vending machine.

The Examiner asserts that vending a product from a machine is an old and well know method of selling the product. Ogaki teaches in Figures 1-4, a vending machine to vending various software programs for the convenience of customer and easy maintenance.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have vending the light source of Teremy in cylindrical roll package of Ansley from an old and well known vending machine of Ogaki in order to provide convenience for the customer and easy maintenance for the vendor.

Response to Arguments

7. Applicant's arguments with respect to claims 1-34 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following prior art are cited to further show the state of the art of composition of a method for providing a replaceable light source.

U.S. Patent No. 3,748,455 to Welton.

U.S. Patent No. 4,146,012 to Elkins.

U.S. Patent No. 4,492,295 to DeWoolfson.

U.S. Patent No. 6,382,433 to Podergois.

U.S. Patent No. 6,786,357 to Renard.

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dalei Dong whose telephone number is (571)272-2370. The examiner can normally be reached on 8 A.M. to 5 P.M..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimeshkumar Patel can be reached on (571)272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2879

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
